Re: Technical Addendum for the
Attainment Demonstration and Technical
Support Document for the Indiana Portion of the
Cincinnati-Hamilton, OH-KY-IN Ozone
Nonattainment Area

Dear Ms. Buhl:

The Indiana Department of Environmental Management (IDEM) has prepared this technical addendum to the Attainment Demonstration and Technical Support Document for the Indiana portion of the Cincinnati-Hamilton, OH-KY-IN Ozone Nonattainment Area to validate the original SIP quality Lake Michigan Air Directors Consortium (LADCO) Round 5 ozone modeling results for the Clean Air Interstate Rule (CAIR). IDEM submitted the Attainment Demonstration and Technical Support Document to the United States Environmental Protection Agency (U.S. EPA) on June 15, 2007 to demonstrate how the area will attain the National Ambient Air Quality Standard (NAAQS) for ozone by the attainment date (i.e. June 15, 2009).

On July 11, 2008, the U.S. Court of Appeals, for the District of Columbia Circuit, vacated U.S. EPA's CAIR in its entirety. Based on the implications of the court's ruling, LADCO in cooperation with IDEM has recently conducted SIP quality Round 5 ozone modeling to determine the air quality impacts associated with CAIR controls not being in place on Electrical Generating Units (EGUs) in the Midwest region. The 2009 modeled results show that all counties in the nonattainment area will attain the NAAQS for ozone of 0.08 ppm by June 15, 2009 without CAIR. Tables 1.2, 5.2, 5.4, 5.6, 6.1, 6.3, and 6.4, (to be considered updates to Tables 1.2, 5.2, 5.4, 5.6, 6.1, 6.3, and 6.4 on Pages 6, 24, 30, 32, 43, 45, and 46 of the Attainment Demonstration and Technical Support Document) show the LADCO Round 5 non-CAIR ozone modeling results.

390610010	Hamilton (OH)	0.080	0.078
390610040	Hamilton (OH)	0.080	0.079
391650006	Warren (OH)	0.086	0.083

These modeling results validate the original Attainment Demonstration and Technical Support Document because the SIP quality modeling still shows that future national and local emission control strategies to be phased-in or implemented in 2008 and 2009 will ensure that the area's air quality will achieve attainment of the ozone NAAQS by June 15, 2009, and provide for ample margin of safety. Enclosed for your information, please find a copy of the LADCO's Regional Air Quality Analysis for Ozone, PM 2.5, and Regional Haze: Final Technical Support Document (Supplement), September 12, 2008.

Charts 3.1 through 3.4 and Table 5.11 and Chart 5.4 (to be considered updates to Charts 3.1 through 3.4 and Table 5.11 and Chart 5.4 on Pages 15 through 17 and Pages 38 and 39 of the Attainment Demonstration and Technical Support Document) have been revised to back out any 2009 projected emissions reductions associated with CAIR EGU control measures. The revised emissions projections are based on non-CAIR modeling recently conducted by LADCO utilizing 2007 as the base year.

NOx Emission Trends**

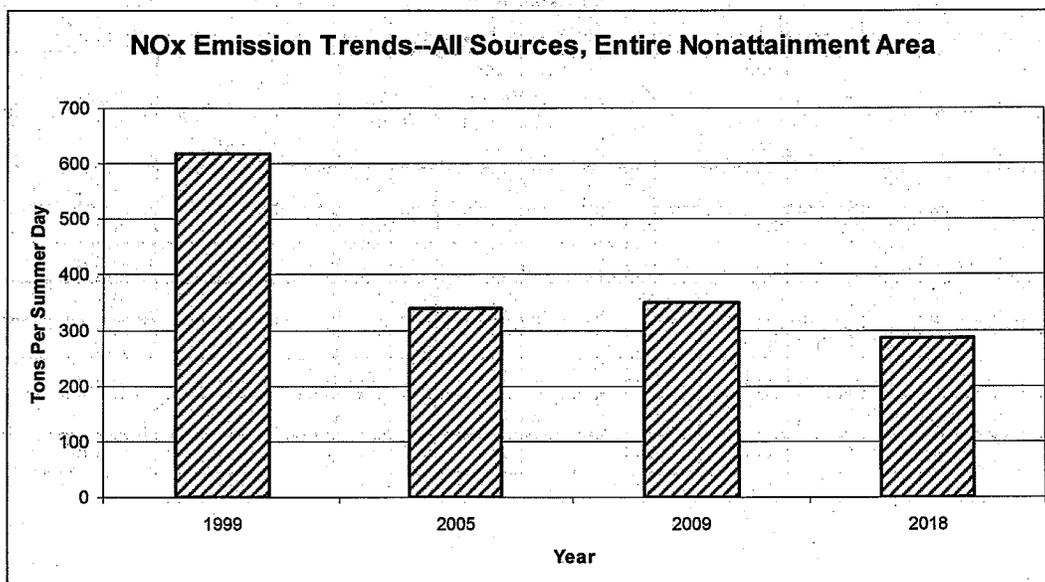

Chart 3.2
VOC Emissions Trends

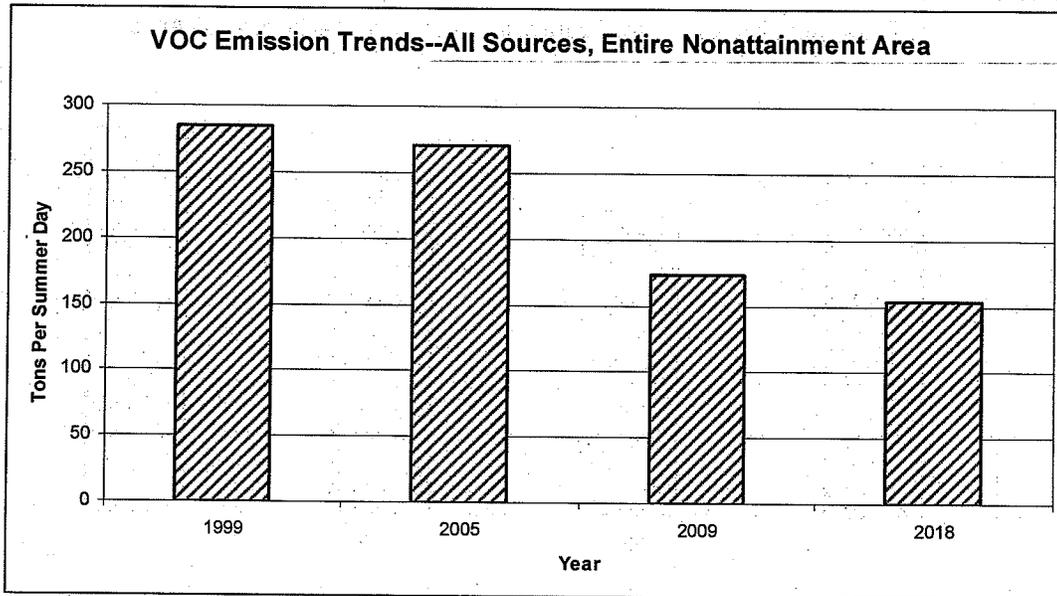

Chart 3.3
NOx Emission Trends—Point Source Category

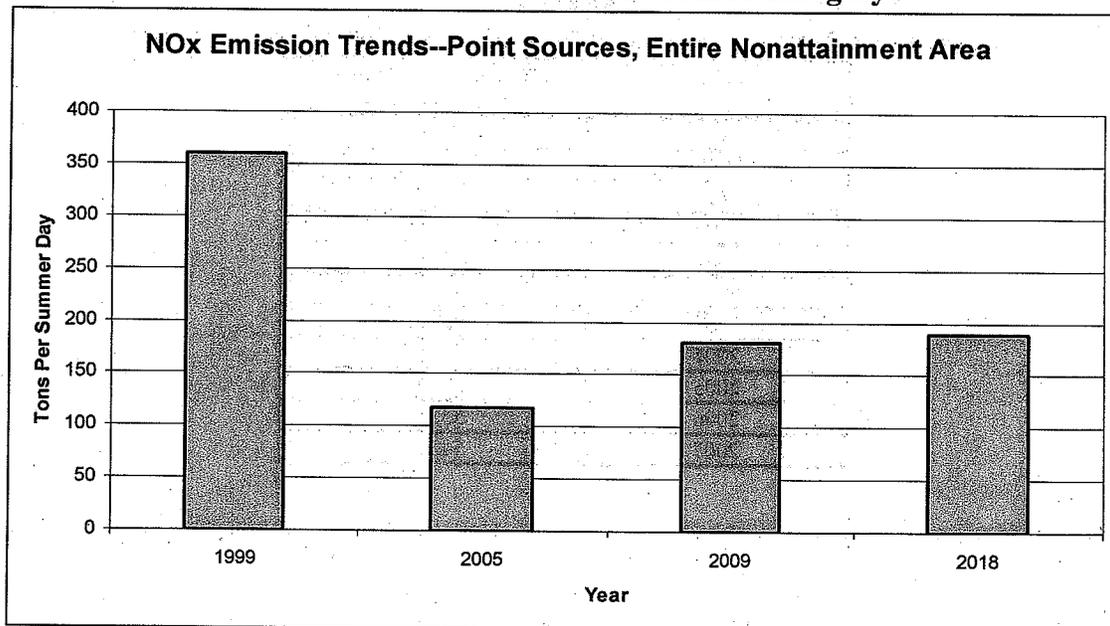

Chart 3.4
VOC Emission Trends—Point Source Category

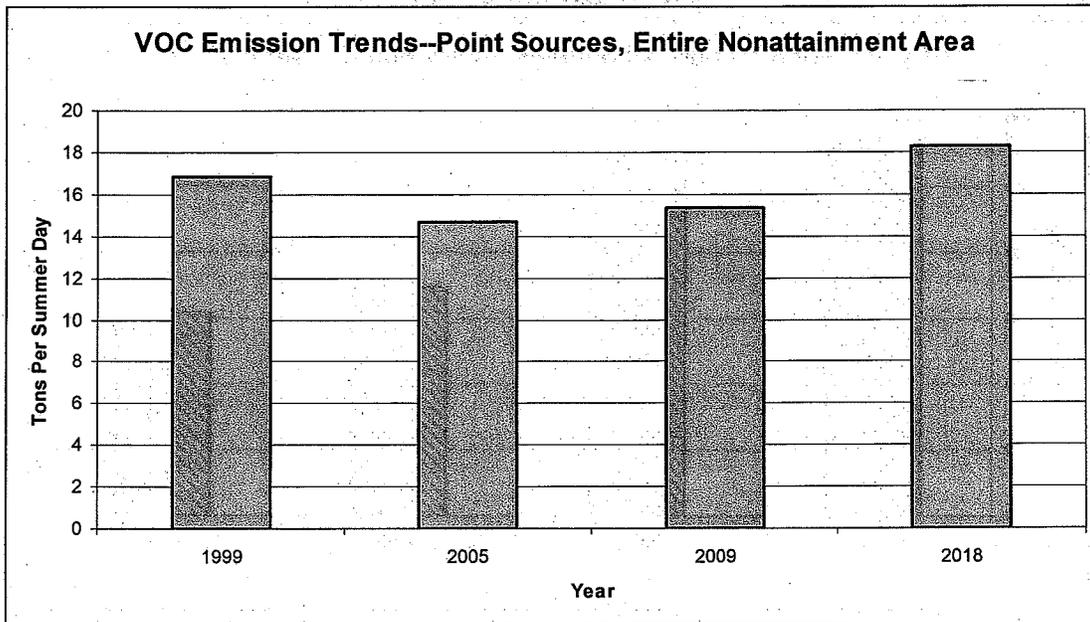

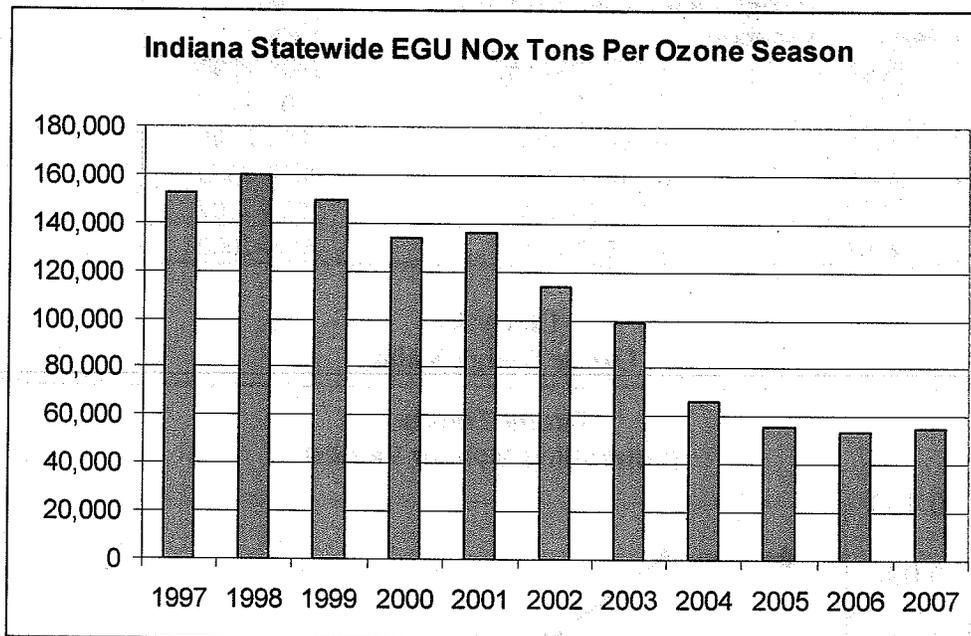

Table 5.11
Trends in EGU Ozone Season NO_x Emissions Statewide in Indiana

Year	NO _x Emissions (Tons Per Ozone Season)
1997	152,834
1998	159,931
1999	149,827
2000	133,881
2001	136,052
2002	113,996
2003	99,283
2004	66,568
2005	55,486
2006	53,768
2007	54,816

Chart 5.4
Indiana Statewide EGU Ozone Season NO_x Emissions

Charts 3.1 through 3.4 and Table 5.11 and Chart 5.4 clearly illustrate that regional VOC and NO_x emissions will continue to decline even without CAIR control measures in place, leading to local reductions between 2007 (base year) and 2009 (attainment year). Although the revised Charts 3.3 and 3.4 shows that regional NO_x and VOC emissions will remain relatively constant between 2005 (base year) and 2009 (interim year) and will slightly increase between 2009 and 2018 (maintenance year), LADCO Round 5 non-CAIR ozone modeling results show that the future mix of sources and emissions rates will **not** cause a violation of the ozone NAAQS. The revised emissions data along with Table 7.2 (to be considered an update to Table 7.2 on Page 51 of the Attainment Demonstration and Technical Support Document) along with Table 7.1 (which did not change) reaffirms the adequacy of the transportation conformity budget outlined in Section 7.0 of the Attainment Demonstration and Technical Support Document.

Table 7.2
Motor Vehicle Emission Budgets for the Ohio and Indiana Portions of the Cincinnati Ozone Nonattainment Area

	2005	2008	2018
VOC (Tons Per Day)	56.03	44.66	23.82
NO _x (Tons Per Day)	108.72	88.70	32.54

Tables 5.7, 5.8 and Charts 5.1, 5.2 and 5.3 (to be considered an update to Tables 5.7, 5.8 and Charts 5.1, 5.2 and 5.3 on Pages 32 through 34 of the Attainment Demonstration and Technical Support Document) show the updated ozone design values through 2008.

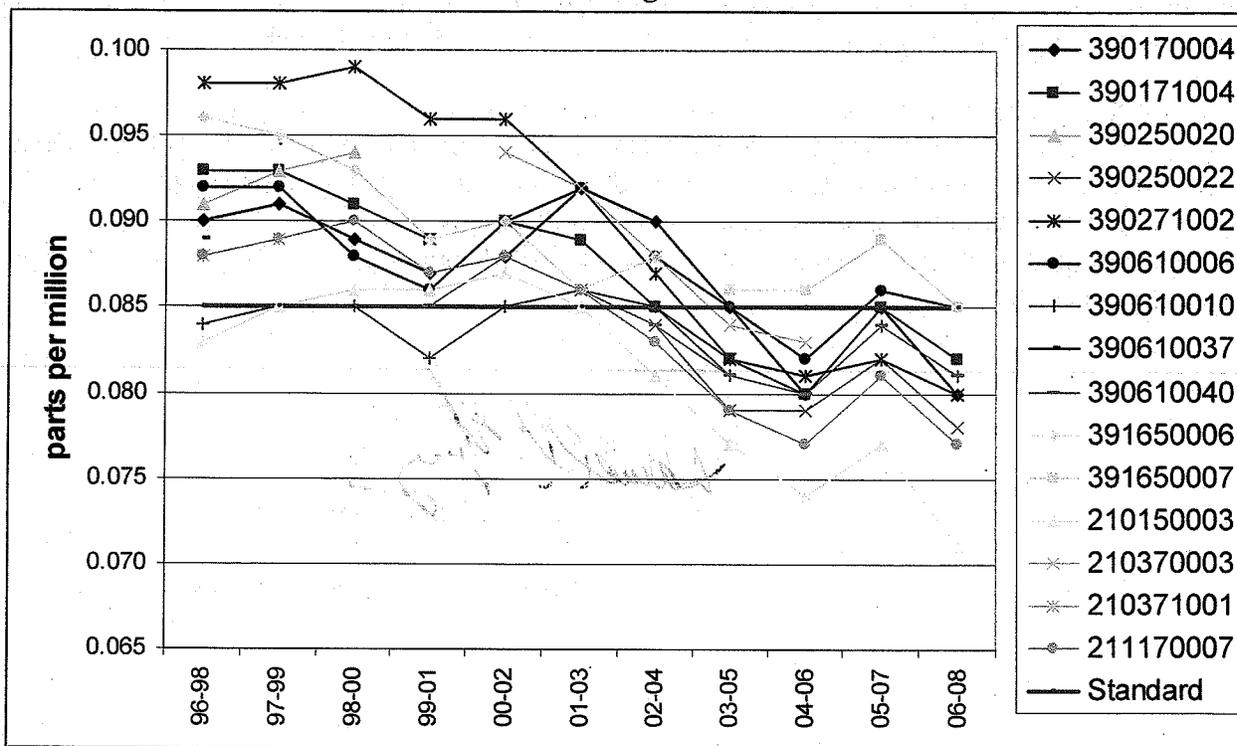

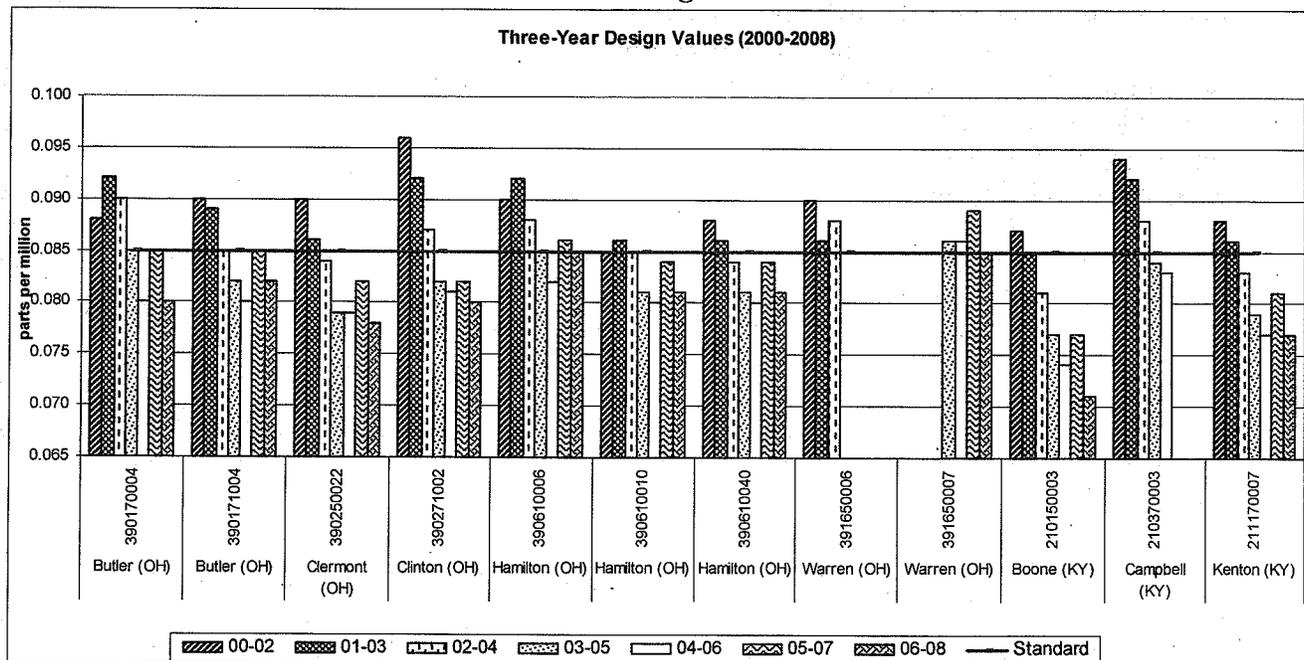

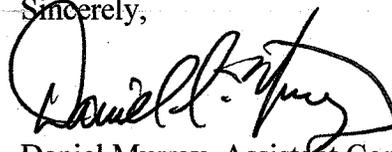

Chart 5.3
Ozone Design Values

IDEM believes that this technical addendum in conjunction with the Attainment Demonstration and Technical Support Document for the Indiana portion of the Cincinnati-Hamilton, OH-KY-IN Ozone Nonattainment Area satisfies Indiana's obligation under Section 172(c) of the Clean Air Act to demonstrate how the area will attain the NAAQS for ozone by the attainment date.

Therefore, IDEM requests that U.S. EPA proceed with final review and approval of the Attainment Demonstration and Technical Support Document for the Indiana portion of the Cincinnati-Hamilton, OH-KY-IN Ozone Nonattainment Area. If you have any questions or need additional information, please contact Mr. Scott Deloney, Chief, Air Programs Branch, at (317) 233-5694 or sdeloney@idem.in.gov, or Ms. Christine Pedersen, Chief, Air Planning Section, at (317) 233-5684 or cpedersen@idem.in.gov.

Sincerely,

Daniel Murray, Assistant Commissioner
Office of Air Quality
Indiana Department of Environmental Management
